

Independent Monitoring Consultants

WATER AND INDOOR AIR QUALITY

Business Challenges

WH&S and all of the various regulations and guidelines in today's environment have an expectation that businesses operate by making their premises safe. Water cooling towers, drinking water, swimming pools, fountains, indoor air quality, in fact the environment where we work and play pose many problems for a business if not properly monitored and managed. If strict hygiene and safety standards aren't maintained bacteria, pollutants, and hazardous materials can all make an environment unfit to work in or visit and can be damaging not only for health and safety, but also to an organisations reputation and image. This is why legislators are expanding the regulations and local authorities are increasing their pressure on companies to implement measures to fulfil their obligations.

HOW DO YOU MEET THESE CHALLENGES

Independent Monitoring Consultants (IMC) provides a range of services and solutions to ensure that companies comply with these regulations and obligations. Independent sampling and testing of cooling towers, swimming pools, fountains, and drinking water for the most important bacteria such as Legionella, coliforms, E.coli, pseudomonas, Total Bacteria Counts, and other bacteria found in water and air. Cooling tower Risk Assessments and Audits are also an important part of any management programme. Indoor air quality over recent years has taken a prominent position with work place safety as we learn the importance of properly managing the physical and chemical parameters, including bacteria and fungi inside our buildings.

What are the key benefits?

- Allows organisations to anticipate and control potential risks
- Helps maintain a safe environment for workers and visitors
- Assists in building and maintaining a good reputation
- Optimises costs by preventing risks and/or avoidable expensive repairs
- Third part independent professional managing of potential risk areas
- Complies with National and local regulations, guidelines, and company goals
